**Portfolio:** <https://desty.page/etechstudio>

## SUMMARY

A professional with over 4 years of experience in design, business process optimization, and 3D Design Engineering. Skilled in designing and analyzing Business Process Reengineering (BPR) projects, focusing on identifying inefficiencies, workflow analysis, and implementing technology-driven solutions to enhance productivity and operational efficiency. As a 3D Design Engineer, I am proficient in using CAD software to develop innovative designs that support manufacturing processes and product development with high precision. With a background in Industrial Engineering, I combine analytical and creative approaches to tackle both technical and managerial challenges. Results-driven, I am committed to delivering efficient solutions that foster progress and success for the company.

## WORK EXPERIENCE

**Supporting Staf of Business Process,** **Jul 2022 - Present**  
**Ministry of Agrarian Affairs and Spatial Planning / National Land Agency**  
**(ATR/BPN)**

As a Business Process Expert, I was responsible for designing and analyzing business process flows across all units within the Ministry of ATR/BPN. Key accomplishments include:

- **Business Process Design:** Developed BPMN flowcharts for all business processes in the ministry, from level 0 to level 3, and designed workflows for the Regional Office and Land Offices, ensuring clear and structured documentation of all processes.
- **Business Process Reengineering:** Conducting risk management analysis and gap analysis of existing business processes, identifying areas for improvement and successfully implementing reengineering to improve efficiency. One of the major achievements is reengineering land services, converting several priority services into e-services with the help of related technical units, which accelerates and facilitates easier access for the public.
- **Digitalization and Integration of Business Processes:** Integrated business process domains and service domains into the Electronic Government System (SIA SPBE) application, supporting the digital transformation of the ministry and improving the efficiency of public service delivery.

**3D Design Engineering, Beaux Button Indonesia (Hybrid Job)** **Nov 2021 - Present**

In my role as a 3D Design Engineer at Beaux Button Indonesia, I was responsible for designing both 2D and 3D models, while ensuring the usability and safety of the designs. Key accomplishments include:

- Developed detailed 2D and 3D designs for various products, ensuring functionality and aesthetic quality.
- Analyzed the usability and safety of designs to ensure they meet required standards and customer expectations.
- Designed manufacturing processes for the production of products, ensuring efficient and effective production workflows.
- Conducted usability tests using completed designs to gather feedback and make necessary improvements.
- Collaborated with the 3D Printing and CNC production teams to ensure smooth integration between design and manufacturing processes.

**Trainer Design Engineering (Part Time Remote Work),  
BINUS Center Bintaro**

**Des 2020 - Des 2022**

As a Design Engineering Trainer at BINUS CENTER BINTARO, I was responsible for providing online training on various design engineering tools and assisting participants in achieving certification. Key responsibilities and achievements include:

- Delivered online training sessions on design engineering software, including SolidWorks, Inventor, Fusion 360, SketchUp, Blender, and AutoCAD, catering to participants' needs and learning levels.
- Developed and assigned real-world industry cases to participants, providing hands-on experience and practical application of design engineering principles.

**Engineering Process & Maintenance (Internship),  
PT PERTAMINA GAS (SPPBE PT KAYU LIMA MAGELANG)**

**Mar 2020 - Aug 2020**

During my internship at PT PERTAMINA GAS (SPPBE PT Kayu Lima Magelang), I focused on process analysis and maintenance of LPG Storage Tanks while completing my thesis. My thesis analyzed the remaining life of LPG Storage Tanks and developed a system to assess the corrosion levels in pipes and pressure vessels. Key responsibilities and accomplishments include:

- **LPG Storage Tank Process Analysis:** Analyzed processes related to LPG Storage Tanks, ensuring safety and operational efficiency.
- **Design & Simulation of Pressure Vessel Flow:** Developed design and flow simulation for pressure vessels to optimize operational performance.
- **Conducted risk-based inspection (RBI) analysis of LPG Storage Tanks,** using RBI API 581 standards to evaluate the condition and longevity of the equipment and Created schedules for regular inspections of LPG Storage Tanks to maintain safety and reliability.

## **EDUCATION**

---

**Bachelor of Engineering**

**2016 - 2020**

University of Muhammadiyah Magelang

- Major in Industrial Engineering.
- GPA 3.86 of 4.00
- Thesis on "Inspection Monitoring System Model to Detect Leakage Risk Level and Inspection Scheduling Oon LPG Storage Tanks".

## **ADDITIONAL INFORMATION**

---

- **Technical Skills:** CAD Software (AutoCAD, Inventor, Fusion 360, Solidworks), Blender, CorelDraw, PhotoShop, Excell, Visio, BPMN Software, Data Analyst.
- **Languages:** English
- **Training Certifications:** Solidworks, Business Process Management, IT Project Management
- **Awards/Activities:** Filing and Application for PATENT (Security System on LPG Storage Tank (S00202004467) in 2020, Student Mobility Program at Universiti Teknikal Malaysia Melaka of Mechanical Engineering study program in 2019.
